Education

Georgia Institute of Technology — Aug. 2022 – May 2026
B.S. Computer Science, GPA: 4.0 — *Atlanta, GA*

- **Coursework**: Design & Analysis of Algorithms, Computer Organization & Programming, Data Structures & Algorithms, Probability & Statistics, Combinatorics, Linear Algebra, Multivariable Calculus, Honors Discrete Math
- **Awards**: President's Undergraduate Research Salary Award (Summer & Fall 2023), Faculty Honors

Experience

Founding Engineer & Researcher — June 2023 – Present
Automorphic (YC S23) — *San Francisco, CA*

- Topics: scalable domain knowledge infusion through context compression and efficient architectural modifications, sample-efficient preference optimization, multi-modal agents for the web
- Developed & maintaining various internal tooling and experimental infrastructure for data processing, training, and inference of language models

Researcher — April 2024 – Present
Confirm Labs — *Remote*

- Working on unsupervised methods for circuit discovery in language models for language models
- Helped develop hypernetwork-based model editor architecture that intervenes on a target model's activations given natural language instructions

Research Intern — June 2023 – July 2023
Oak Ridge National Laboratory — *Oak Ridge, TN (Remote)*

- Adapted the Relational Transformer and Tokenized Graph Transformer architectures to support property prediction tasks on crystal structures and explored heterogeneous GNN architectures

Undergraduate Researcher — Sept. 2022 – July 2023
Fung Lab, Georgia Tech — *Atlanta, GA*

- Developed a novel model-agnostic method involving virtual nodes to improve performance of graph neural networks on metal organic framework regression tasks (PURA recipient)
- Maintained core research software, implemented distributed training, hyperparameter optimization, large-scale data preprocessing optimized for graphs

Research

Gupta, A., Baskaran, S., & Anumanchipalli, G. (2024). Rebuilding rome : Resolving model collapse during sequential model editing. ACL 2024 KnowledgeLM workshop. Retrieved from https://arxiv.org/abs/2403.07175 (link, pdf, code)

Technical Skills

Languages: Python, Java, JavaScript, MATLAB/Octave, C++, HTML/CSS, LaTeX
Skills: PyTorch, Docker, Git, Ray, Slurm, GCP, Unix, CAD & prototyping
